

PUT THE **CLOUD** TO WORK FOR YOU

Not all SMBs are the same, which makes finding a one-size-fits-all cloud solution nearly impossible. However, there is a solution that will meet the needs of each SMB's different set of requirements while keeping data more secure: **say hello to the**

HYBRID CLOUD

Hybrid Cloud is the combination of a public cloud provider with a private cloud platform designed specifically for use by a single company or organization. The private and public cloud services operate independently of each other yet communicate over an encrypted connection along with dedicated on-premises infrastructure solutions, thus private data exposure is greatly reduced while delivering maximum benefits and performance from each component.

WHY IS HYBRID CLOUD RIGHT FOR YOU?

Hybrid Cloud solutions are often utilized in the financial sector, healthcare industry, retail, marketing & multi-media, among others and can be configured on demand to meet the needs of each specific situation, so there is very little risk associated. The result is an architecture that works well to safeguard data, optimize network latency and connectivity, and streamline processes. The greater risk is to not implement a solution that fully protects against business interruption and data loss.

Make sure your business has the latest technologies and devices to complement your Hybrid Cloud setup:

- Workstations, including desktops, monitors, notebooks, tablets
- Telephony, video conferencing and wireless projection
- Laser and LED multifunction printers
- Networking hardware, servers, backup storage and UPS
- Security cameras
- Secure private cloud hardware

Hybrid Cloud Benefits according to cloud users:

- 55%** increased efficiency
- 49%** improved employee mobility
- 32%** increased ability to innovate
- 31%** freed current IT staff for other projects
- 25%** reduced IT operating costs
- 24%** enabled us to offer new products/services
