

Transforming Education with **BYOD** SOLUTIONS

Bring the freedom to learn anywhere, anytime, with Cisco K-12 Education BYOD Solutions. These bring-your-own-device solutions provide the freedom to go anywhere on campus and still perform the tasks you would on a wired network. School wireless improves collaboration, and also:

- Deploys new teaching tools that facilitate teaching innovation
- Exposes students to a differentiated curriculum
- Opens up access to enhanced teaching and learning resources
- Increases physical safety to create a highly secure school environment

Cisco networking solutions ensure proper scalability for individual district needs and success levels:

Small Primary School Districts (Less than 2,500 students)

Ligonier Valley High School in Pennsylvania will be able to provide smooth and continuous connectivity to all mobile device users, regardless of the type of browser or device, all in a controlled and centrally managed environment that helps support FERPA (Family Educational Rights and Privacy Act) compliance.

Medium Primary School Districts (2,500 - 25,000 students)

Lake Washington School District in Washington enables secure remote accessibility for students, parents, teachers and administrators, enabling a more engaged learning experience amongst all parties. Parents can submit their child's lunch payments immediately; teachers can update student grades instantly; district management can manage instructor performance data from any school location.

Large Primary School Districts (More than 25,000 students)

Desert Sands Unified School District in California taps Cisco virtualization and BYOD solutions to enable teachers, students, staff, and visitors the freedom to go anywhere on school grounds and have the same experience that they would on a wired network. The Cisco-based network ensures equal access to student-centered learning and has helped teachers and students achieve goals.

We can bring your school a right-sized portfolio.

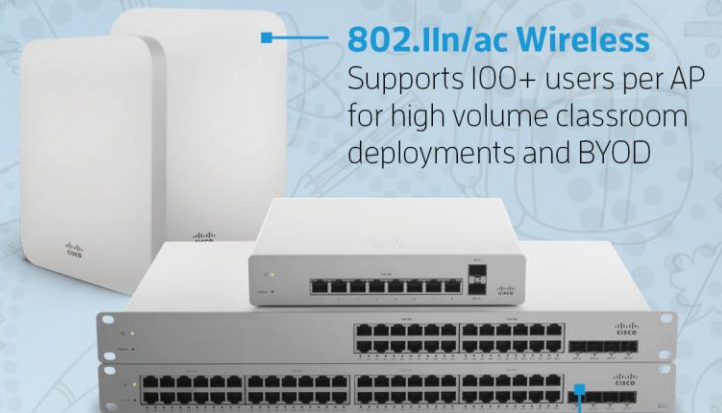

Isn't it about time that both students and teachers are provided with a truly collaborative and connected learning environment? Cisco Meraki cloud networking is built for the modern K-12 classroom and provides a simple, yet powerful solution to create a reliable and secure network environment for improved student and teacher education.

- 802.11n/ac wireless access points are optimized for high density classroom environments
- Ultra-reliable and easy to manage access switches scale to schools of all sizes
- Education-centric security appliances provide CIPA-compliant content filtering and web caching
- Free cloud-based mobile device management enables secure, manageable BYOD and I:1 deployments
- Intuitive cloud-based management is easy to use without specialized training or dedicated staff

Enabling a SMARTER WAY TO LEARN

100% Cloud Managed Networking Product Family

802.11n/ac Wireless

Supports 100+ users per AP for high volume classroom deployments and BYOD

Gigabit Ethernet Switches

Ensures downtime and disruption are minimized in the event of physical switch failure

Security Appliances

CIPA compliant content filtering and SafeSearch

Mobile Device Management

Centralized management of iOS devices, Androids, Macs, and PCs

If you're thinking about an infrastructure upgrade, we'll evaluate your current campus limitations and propose a comprehensive networking solution that ensures maximum efficiency for your staff and students.
