

THE POWER YOU NEED FOR HOWEVER YOU WORK

Trust your business to equipment *designed* for business.

All computers are NOT created equal! At first glance, a workstation and a desktop PC may look an awful lot alike, but under the chassis it's an entirely different story. Knowing when to invest in a workstation will help save you countless hours spent trying to recover lost data and help you get the best return on your investment.

The Lenovo logo, consisting of the word "Lenovo" in white sans-serif font on a red rectangular background.

Not everyone needs a workstation. A business class or commercial PC is ideal for typical employees running standard office applications, working with web design and audio editing tools, even with moderate to high workloads.

Business workstation systems are generally used in more high-intensity environments with programs that are required to move a lot of data around the system very quickly and in instances where data corruption cannot be tolerated under any circumstances.

Users involved with medical research and imaging, CAD, engineering, financial computing, heavy data analysis, and post-production film, video and animation editing would benefit most from a workstation. Office "power users" may find an entry-level workstation helpful as it will increase their productivity, improve system reliability, and limit downtime.
